

LinuxCourseContentforL1&L2jobprofile

Module1-Basicconcept

- i) Introandhistoryof Linux
- ii) InstallationofLinux8(GUI&CLI)
- iii) Basiccommands
- iv) Filesystemhierarchy
- v) Editor(VI,Vim,nano,gedit)
- vi) Hardandsoftlink
- vii) Grep,Egrep,Fgrep
- vii)Sed,Cut,Awk,Findandlocate

Module2–User &groupmanagement

- i) User management
- ii) Groupmanagement
- iii) Passwd,group,shadow,gshadowfilefullinfoandpractical
- iv) userandgrouptroubleshooting
- v) SUcommanduse
- vi) SUDOcommanduse

Module3–Partitionmanagement

- i) Makeanddeletethepartition
- ii) EXT2,EXT3,EXT4,XFSfilesystemanduses
- iii) Mounting(Temporary,Permanent)
- iv) Updatefilesystemwithoutlossthe data
- V) SwapPartition(makefrom2ways)
- Vi)Givepasswordonpartition(LUKS)

Module4–Permissionmanagement

- i) Permission(numerical,symbolic)
- ii) Specialpermission(suid,sgid,stickybit)
- iii) UMASK

Module5–Servertroubleshooting

- i) Breakrootpassword(2ways)
- ii) Bootingprocessoflinux
- iii) GiveandbreakGrubpassword
- iv) Grubcorruptand recover
- v) Kernelpanictroubleshooting
- vi) Control-Dtroubleshoot

Module6–Adminworkmanagement

- i) Compression,encryption ,Tar,gzip,bzip2andxz –databackup
- ii) JobScheduling(at,crontab)
- iii) Runlevel
- iv) Filesecurity(Attributes)
- v) Locktheuseraftergive3wrongpassword

Module7– Networking

- i) 3waytogiveIP address
- ii) Makeanetworkinwindowsandlinuxmachines
- iii) NFS(networkfile sharing)
- iii) SCP(securecopy)
- iv) Rsync
- v) NetworkTeaming

Module8–Consoleandsoftwareinstallationmanagement

- i) SSHServer(12practical)
- ii) Multifactorauthentication(OTPsecurityinSSH)

- iii) Telnet
- iv) XRDp
- v) RPM
- vi) LocalYUMserver

Module9– Monitoring

- i) Seetheprocess
- ii) Changethepriorityandkilltheprocess
- iii) Topcommanddefine

Module10–LinuxSecuritymanagement

- i) Firewall
- ii) SELinux
- iii) Redhatsubscription

Module11–StorageManagement

- i) Quotamanagement
- ii) ACL
- iii) RAID(Level0,1,5,6,10)
- iv) LVM(10Practical)

Module12–ServersManagement

- i) Smbaserver
- ii) FTPserver
- iii) SFTPserver
- ii) MakeYUMclient
- iii) DHCP
- iv) NTP
- v) BIND (DNS)
- vi) HTTP(Apacheserver)
- vii) HTTPS
- Viii)Squid(Proxyserver)
- Xvii) Server Patching
- Xviii)KernelUpdation Xix)
- Nagios Server
- Xx)Zabbixmonitoringtool

Module13:-AnsibleAutomation

- i) IntroofAnsible
- ii) AnsibleLabsetup
- iii) Ansibleallmoduleuse(12module)
- iv) Playbook
- v) variables
- vi) Loop
- vii) Fact
- viii) Conditionstatement
- ix) Notifyandhandler
- x) Tags
- xi) Ignoreerrors
- xii) Rescue,blockandalways

=====

Linux Real Time Content :

1. About Redhat satellite server.
2. Its usage in real time and theory part of how to configure satellite server.
3. How to establish connection of all the Linux servers in the environment to satellite server.
4. How to do OS patching with the help of Satellite server.
5. How to create kickstart file in satellite server

6. How to install OS in physical and virtual machines with the help of kickstart file.
7. How to configure Satellite server in YUM for Linux servers

Troubleshooting and Real time topics of Redhat Linux, and some other topics.

1. Difference between blade and standalone server.
2. About enclosure (chassis) and connectivity of blades to the enclosure.
3. About HP Prolaint and HP blades G5 -G9.
4. About how to connect to physical Machines ILO and virtual machines ILO to solve booting issues.
4. About virtual machines environment which run on vmware and hyper-v
5. Multipathing & Powerpathing in detail with all the options.
5. Kernel tuning and kernel modules. loading and unloading of kernel modules.
6. IP Alias IP bonding (active-active & active-backup)
7. VSFTPD in depth with sftp, FTPS with implicit and Explicit. Configuring external FTP server for external users.
8. NFS with indepth using all the options available for NFS server & client end.
Example, root_squash, no_root_squash, sync, async, hard, soft, rsize, wsize etc.
9. Booting Process will be in detail.
10. LVM issues like filessystem read-only mode, inodes full, super-block corrupt etc.
11. Solving issues by going into single user mode, maintenance mode, rescue mode.
12. About ITIL Process
13. Change Management, Incident Management & Problem Management.
14. Resume Preparation including Day to Day job, Project environment, Supporting servers.
15. Interview Questions

Important Info:-

1. Course cover in approx. 45 classes.
 2. Recorded video and not will provide after every class and access lifetime.
 3. Provide 800 interview question for sure selection.
 4. Help to make impressive resume.
 5. Join upcoming all linux batch free for revision.
 6. Share job openings.
 7. Lifetime support for doubts and also help in your office server issues.
